

UreyukiBox — Product Guide

From "looking at stock" to "deciding what to reorder"

UreyukiBox is a Shopify app for demand forecasting and purchasing. It brings your sales velocity, on-hand stock and incoming shipments together in one place, so you can decide what to reorder and produce a purchase order for your supplier.

Shopify's own inventory and purchasing app, **Stocky, ends on 31 August 2026, and every Stocky API stops that day.** Stocky remains read-only for export for at least 90 days, but suppliers cannot be exported. UreyukiBox was built first for stores selling in Japan that need a new purchasing workflow — and it also works for stores that never used Stocky.

Please read first — interface and message language

The UreyukiBox admin screens, purchase-order PDFs and barcode labels follow your Shopify admin language — set your admin to English and the app is in English.

Notification emails, Slack and LINE messages, and the purchase orders you email to suppliers have also been available in English since 31 July 2026, and **support is provided in Japanese and English** — notifications follow the store's country rather than the admin language. The screenshots below show the Japanese interface, which is what you see with a Japanese admin.

What is available today

Sta tus	Capability	What you can do
Ava ilabl e	Inventory & sales visibility	See on-hand stock, sales velocity, and which products need reordering, in one list
Ava ilabl e	Demand forecast & reorder points	Review safety stock, lead time, intermittent demand and a 51-country seasonal calendar. Event timing does not require a full year of history, but quantities use your own sales; with no basis, no number is suggested
Ava ilabl e	Purchase orders	Draft a PO per supplier, edit quantity / unit price / tax category, then export to PDF or CSV, or email it straight to the supplier

Sta tus	Capability	What you can do
Ava ilabl e	Notifications	Get low-stock alerts by email, Slack or LINE
Ava ilabl e	Receiving & PO status	Confirm an order with "mark as ordered", then record receipts — including partial deliveries — in one place
Ava ilabl e	Warehouse operations	Stock adjustments with reason codes, stocktakes, barcode scanning and barcode label printing; transfers between locations require Business
Ava ilabl e	Stocky migration	API copy through 31 August, plus Low Stock / stocktake CSV routes and MOQ paste

We do not hide the arithmetic

UreyukiBox does not just show a black-box "recommended quantity".

Order quantity = reorder point – on hand – incoming – already ordered

Sales velocity, lead time, safety stock and the seasonal adjustment are all visible on screen. The goal is not to replace your buyer's judgement, but to put every input they need in front of them.

Installing it will not silently change your stock

UreyukiBox reads your Shopify products, orders, inventory and locations, and uses them for analysis and purchase orders. **The nightly sync never writes back to your Shopify inventory.**

Your stock levels change only when **you** perform an action in the app:

3 / 6

- **Recording a receipt** with "reflect in Shopify inventory" selected (only the quantity you received)
- **Recording a stock adjustment** (logged with a reason code such as damage or loss)
- **Confirming a stocktake** (the difference against your counted quantity)
- **Recording a transfer between locations** (both the origin and the destination)

Alongside that:

- At install time we ask for **write access to inventory** in addition to read access. It is required for the four actions above; no write happens unless you trigger it.
- Copying data from Stocky never deletes or modifies anything on the Stocky side.
- You can edit a purchase order before you finalise it.
- Receiving a notification never places an order with a supplier automatically.

What can be copied from Stocky

Data	How it is used after the copy
Suppliers	Linking products to suppliers, and as the recipient of purchase orders
Purchase orders	Details stored in the database; the completion screen shows a count (no browse / export UI for historical details)
Stock adjustments	Details stored in the database; the completion screen shows a count (no browse / export UI for historical details)
Purchase tax types	Master stored in the database excluding sales-purpose rows; current-product tax assignments are not migrated automatically
Product-to-supplier links	Derived from past purchase orders and used to auto-draft new POs

The source store is detected automatically from the Shopify store where you installed UreyukiBox. Your Stocky API key is used only for the copy itself and is never stored.

Before you copy, press "**Sync now**" at the top right of the dashboard once. If you copy while UreyukiBox still has no products, only the product-to-supplier links come through as 0 — run the sync and redo the copy and they will appear (nothing is duplicated).

Every Stocky API stops on 31 August 2026. The non-API routes import reorder points and lead times from Low Stock CSV, count history from each stocktake CSV, and MOQs pasted from Stocky's Vendor → Order limits table. Because suppliers cannot be exported from Stocky, copy them before the API deadline.

Pricing

Paid plans include a 14-day free trial.

Plan	JPY-billed / non-JPY	Products / locations	Typical use
Free	¥0 / \$0	100 / 1	Stock visibility, manual purchase orders, Stocky copy
Starter	¥2,980 / \$19	1,000 / 2	Reorder points, quantity suggestions, auto-drafts, email alerts
Pro	¥5,980 / \$39	10,000 / 5	Everything in Starter, plus Slack and LINE alerts
Business	¥12,800 / \$83	Unlimited / unlimited	Large operations; transfers between locations

Shopify bills the fixed JPY price to JPY-billed stores and the fixed USD price to every non-JPY store. Per-location destinations and analysis work up to the plan's location cap; transfers between locations require Business.

Pricing and features are as of 2026-08-09. Please confirm the current terms shown on the actual billing screen.

Why we built it

Stocky's end of life leaves Japanese stores with some specific gaps:

- Purchasing workflows that are usable in Japanese without guesswork
- Purchase orders that handle Japanese tax categories and qualified-invoice registration numbers
- Alerts that arrive on LINE and Slack, not just email
- A demand forecast a buyer can actually explain to their colleagues

UreyukiBox is not a screen-for-screen copy of Stocky. The aim is to join up "deciding the order", "explaining it internally" and "sending the purchase order" into one flow.

Not available today / possible future work

The following items are not available today. They are candidates, with no committed delivery date or guarantee. Decide based only on what ships now.

Category	Item
Available	English UI — follows your Shopify admin language. Notification emails, Slack and LINE messages, and supplier purchase-order emails, are in English too (decided by the store's country). Support is in Japanese and English
Future candidate (no date)	"Days until stockout" / "lost sales" visibility and a weekly digest
Future candidate (no date)	Direct API integration with Shopify native POs
Future candidate (no date)	Multi-store decisions and accounting integrations
Unsupported (no delivery commitment)	A dedicated Shopify POS UI and importing sales from other channels

※ **Receiving, purchase-order status management, and the full order-to-receipt history are already available** — as are stock adjustments, stocktakes and barcode scanning; transfers between locations require Business.

Support

We can help in Japanese or English with pre-purchase questions, copying from Stocky, and day-to-day operation. The interface follows your Shopify admin language.
